Abhishek Kinagi

Director at Morgan Stanley
Bengaluru, Karnataka, India

Summary

With over a year as Director at Morgan Stanley, I contribute to the Equity Structured Products division, focusing on backend development, workflow optimization, and performance enhancements for high-throughput trade capture and document generation platforms. Proficient in Java and Scala, I lead initiatives to modernize legacy repositories, enhance CI/CD reliability, and streamline build integrity, ensuring scalable and robust technical solutions. Bringing a strong foundation in systems design and databases, my work emphasizes improving technical efficiencies while aligning closely with business stakeholders, sales, and trading teams. Passionate about solving complex challenges, I aim to deliver impactful software solutions that drive operational excellence and enable seamless financial operations.

Experience

Morgan Stanley

1 year 6 months

Director P3

April 2026 - Present (5 months)

Bengaluru

- Working within the Equity Structured Products division under Institutional Securities, contributing to in-house trade capture and document generation platforms used by sales and trading teams.
- Designing and implementing backend enhancements, workflow optimizations, and performance improvements across Java and Scala-based systems handling high-throughput financial operations.
- Leading migration efforts for legacy repositories and build systems onto centralized platforms, improving build integrity, dependency management, and CI/CD reliability.

- Collaborating closely with business stakeholders, sales, and traders to understand workflows, document requirements, and deliver scalable technical solutions aligned with front-office needs.
- Providing production support for critical trading workflows during business hours, ensuring timely issue resolution and operational stability.
- Driving cross-team collaboration to design and deliver solutions efficiently across engineering and business functions.
- Mentoring junior engineers through technical guidance, debugging assistance, and code reviews to improve engineering quality and delivery consistency.
- Actively promoting the use of agentic AI workflows and automation-first development practices to improve developer productivity, accelerate delivery, and reduce repetitive operational effort.
- Known for strong ownership, consistent execution, and the ability to quickly ramp up on complex systems and deliver pragmatic solutions under tight timelines.

Senior Software Engineer

March 2025 - April 2026 (1 year 2 months)

Bengaluru

1. Working with Equity Structured Products under Institutional Securities, on the in house trade capture system.
2. Adding enhancements and performance improvements to the existing systems.
3. Migration of existing source code onto central repositories, to ensure build integrity.

Senior Software Engineer

March 2025 - April 2026 (1 year 2 months)

Bengaluru

1. Working with Equity Structured Products under Institutional Securities, on the in house trade capture system.
2. Adding enhancements and performance improvements to the existing systems.

3. Migration of existing source code onto central repositories, to ensure build integrity.

Goldman Sachs

Technology Analyst

October 2021 - April 2024 (2 years 7 months)

Dallas, Texas, United States

- Working under PWM(Private Wealth Management) mainly focusing on Books & Records and Asset Servicing apps using Java, Sybase SQL, Bash Scripting.
- Automated majority of software support framework for apps, reducing manual intervention by 25%.
- Worked on booking a variety of different trades for Quicken Data Testing under test environment.
- Provided application users with a variety of different Database Scans, needed for reporting purposes and improved the overall turnaround time by 40%.

Infosys

Technology Analyst

October 2021 - April 2024 (2 years 7 months)

Dallas, Texas, United States

- Working under PWM(Private Wealth Management) mainly focusing on Books & Records and Asset Servicing apps using Java, Sybase SQL, Bash Scripting.
- Automated majority of software support framework for apps, reducing manual intervention by 25%.
- Worked on booking a variety of different trades for Quicken Data Testing under test environment.
- Provided application users with a variety of different Database Scans, needed for reporting purposes and improved the overall turnaround time by 40%.

Numerify

Associate Software Developer (Platform)

July 2017 - April 2019 (1 year 10 months)

Bengaluru Area, India

Metadata Driven Application Console (MDAC) – Business Intelligence (BI) Application Modeler:

- Contributed to the BI Application Modeler, which allows users to model source data, and perform desired transformations on it to store it into the data warehouse, which is used down the line to form dashboards and charts to provide insightful analytics on customer data.
- Integrated Z-standard encoding capability in MDAC for tables created on Redshift data warehouse, which provides a high compression ratio for the data stored in the tables.

ETL (Extract-Transform-Load) Batch Data Pipeline Job:

- Automated the batch data pipeline job which fetches data from the source database performs the desired transformation as defined in the BI Application Modeler, and ultimately stores the data in the redshift warehouse. The pipeline offers restart-ability at various phases within the job to eliminate manual intervention by users who run the pipeline job.
- Consolidated an additional phase for automated execution of scripts on the relational databases after the ETL, as part of the batch data pipeline job, with support for restart-ability, eliminating the earlier need for manual execution of scripts by users.
- Implemented automatic startup and shutdown of AWS RDS servers during an ETL run, which provided major cost cutdown for the company, as the RDS service is pay for only what you use.

Spark Machine Learning Models – Platform for Building and Execution:

- Provisioned a platform for building customized machine learning models as per customer's requirements, based on Spark ML libraries, with the facility to train and test models using provided customer data. The models are used to predict sensitive metrics on client data.
- Programmed execution of Spark ML models, as part of the batch data pipeline job, which uses the data-warehouse tables as input to provide a prediction on sensitive metrics and then to store the result back in the data-warehouse.

Wipro Digital

Summer Intern

May 2016 - July 2016 (3 months)

Electronic City, Bangalore

- Developed Universal Data Parser which allowed flexible adaptation of data streams from a wide range of Internet of Things devices into a desired human-readable format using Java and Python.

Education

Ira A. Fulton Schools of Engineering at Arizona State University

Master of Science - MS, Computer Science · (2019 - 2021)

Visvesvaraya National Institute of Technology

Bachelor of Technology - BTech, Computer Science and
Engineering · (2013 - 2017)
