EXECUTIVE SUMMARY

Director at Morgan Stanley in the Equity Structured Products division (IST) with a strong foundation in distributed systems, high-throughput architectures, and algorithmic problem-solving. Recognized department innovator and leader in mature agentic AI engineering workflows, converting product epics into production-ready software in days. Extensive track record across Morgan Stanley, Goldman Sachs, and Numerify engineering resilient trading backends, automated test frameworks for multi-dependency services, and large-scale data pipelines. Master of Science in Computer Science from Arizona State University.

CORE COMPETENCIES & TECHNICAL ARSENAL

Agentic AI & Automation:	Mature Agentic Pipelines (Epic-to-Code in days), Claude Code, Amp, GitHub Copilot, Autonomous Multi-Agent Workflows, AI-First Architecture
Testing & Resiliency:	Full-Pipeline Multi-Dependency Service Test Automation, Mockless Contract Verification, Playwright, Selenium, OpenJDK 26 Assertion Verification
Core Languages:	Java (OpenJDK 26, Concurrency, Streams API), Scala (Functional Systems), Python, C++, Sybase SQL, Bash
Systems & Architecture:	High-Throughput Trade Capture, Financial Document Generation (DocGen), Spring Boot Microservices, Distributed Systems
Data & Cloud:	Sybase ASE, AWS Redshift, Apache Spark ML, AWS RDS Lifecycle Automation, ETL Batch Pipelines, Z-Standard Compression

PROFESSIONAL EXPERIENCE

Director P3 — Equity Structured Products • Morgan Stanley

April 2026 – Present | *Bengaluru, India*

- **High-Throughput Financial Platforms:** Architect and enhance in-house trade capture and automated document generation engines in Java and Scala for front-office sales and trading desks handling structured derivatives.
- **Department AI Innovator & Agentic Pipelines:** Pioneered mature agentic AI workflows across the department, architecting multi-agent pipelines that convert complex product epics into fully verified, production-ready code in days rather than sprints.
- **Multi-Dependency Test Automation:** Engineered comprehensive end-to-end automated test suites for deeply coupled, multi-dependency microservices, eliminating manual testing toil and catching regression issues pre-merge.
- **Leadership & Skills Development:** Championed department-wide adoption of cutting-edge AI agent tools (Claude Code, Amp, GitHub Copilot), mentoring senior and junior engineers on prompt engineering, agentic autonomy, and AI-first engineering standards.
- **CI/CD & Monorepo Modernization:** Led strategic migrations of legacy repositories onto centralized build systems, streamlining dependency trees and maximizing build integrity.

Senior Software Engineer — Equity Structured Products • Morgan Stanley

March 2025 – April 2026 | *Bengaluru, India*

- Engineered low-latency trade capture processing modules and enhanced existing document assembly pipelines.
- Executed code migrations to standardized central repositories, enforcing strict CI/CD linting and build standards.

Technology Analyst — Private Wealth Management (PWM) • Goldman Sachs

October 2021 – April 2024 | *Dallas, Texas, USA*

- Engineered core Books & Records and Asset Servicing platforms utilizing **Java, Sybase SQL, and Bash scripting**.
- Automated software support and incident response frameworks, reducing manual support overhead by **25%**.
- Optimized database scanning queries and reporting pipelines, cutting overall operational turnaround time by **40%**.

- Managed rigorous trade booking validation under test environments for Quicken data integrity verification.

Associate Software Developer — Platform & ML · Numerify

July 2017 – April 2019 | *Bengaluru, India*

- Contributed to the **Metadata Driven Application Console (MDAC)** BI Modeler for customer data warehousing on AWS Redshift, implementing Z-Standard columnar compression.
- Engineered automated restartable ETL batch pipelines, eliminating manual intervention across multi-phase execution.
- Built platform infrastructure for custom Spark ML models to predict operational metrics on enterprise client datasets.
- Automated AWS RDS server startup/shutdown hooks during ETL runs, delivering substantial cloud infrastructure cost savings.

EDUCATION

Arizona State University (Ira A. Fulton Schools of Engineering) 2019 – 2021 | Tempe, AZ, USA

Master of Science (MS) in Computer Science

Visvesvaraya National Institute of Technology (VNIT) 2013 – 2017 | Nagpur, India

Bachelor of Technology (BTech) in Computer Science & Engineering

ALGORITHMIC EXCELLENCE & OPEN SOURCE

290 LeetCode Problems Solved (146 Easy, 137 Medium, 7 Hard) • Primary maintainer of **code-lab**: Monorepo holding 567 100% verified Java algorithms with official GraphQL signatures, Playwright browser automations, and Python constraint solvers.
